

Patio Awning guide

MOTORS AND AUTOMATED SYSTEMS RADIO TECHNOLOGY SOMFY®

HOME MOTION by
somfy®

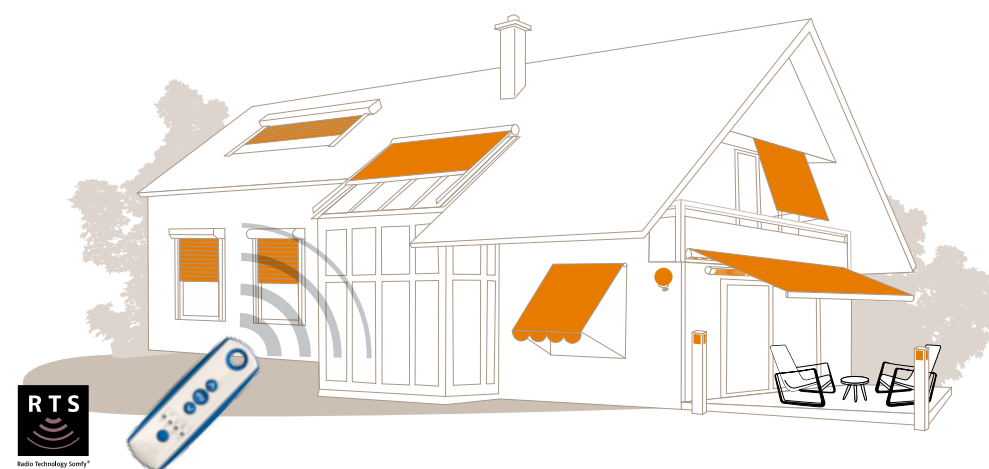

Motorise your awning to secure your investment and make the most of your patio

- p. 4** Benefit from the ease of remote control and operate your awning without moving from your deck chair. Farewell to cumbersome crank handles.
- p. 5** Protect your patio and the inside of your house from sunlight and heat with the sunlight sensor, which lowers.
- p. 5** Extend the life of your awning with smooth, handle-free movement and automatic wind protection.
- p. 6-7** Spend more time on your patio, both day and night, and also in spring and fall.

Radio technology: to operate your awning without leaving the comfort of your chair

Radio Technology Somfy®

Operate your awning without moving, with a single click on the remote control unit, which sends your orders to the awning using secure radio technology.

A clean and reliable installation

The system is easy to install, with no cables between the control units and motors. No need to dig channels in your walls, so your décor and façade are preserved.

A reliable investment

What's more, by choosing Radio Technology Somfy® for your awnings, you can also manage all motorised house openings remotely (roller shutters, external venetian blinds, indoor blinds, garage doors and gates).

Somfy motors are also available in wired and io-homecontrol® versions. Ask your installer to advise you!

Why choose Somfy ?

CE Somfy drive units comply with European safety standards. They are designed and tested to stand up to several thousand cycles of use under the most difficult climatic conditions. Before they are installed in your home, 100% of Somfy products are tested on the production line.

Warranty Somfy guarantees its products for 5 years for its installer and manufacturer clients.

What you need to know about motorisation

All types of awning can be motorised!

Whatever type of awning you choose, there is an automated, easy and secure Somfy solution for you.

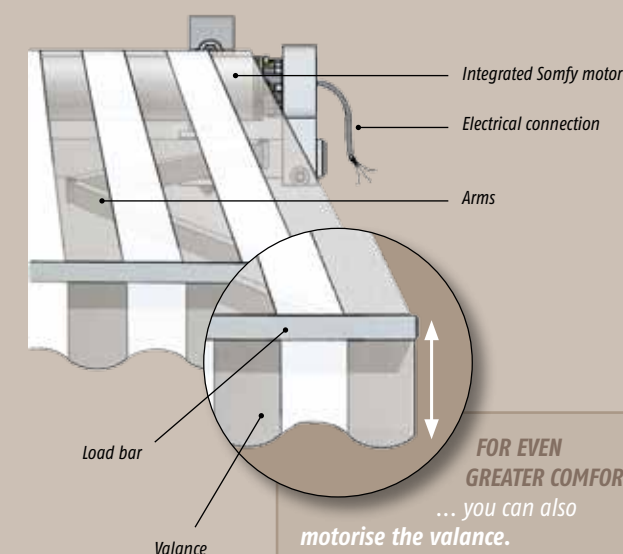

Moving from a crank handle to motorisation is possible and easy!

Your handle-operated awning can be motorised easily **without changing your existing installation.**

For replacement or in the event of a problem with the strap or the crank handle of your awning, remember this and talk to your installer about it!

How is a motor installed?

The Somfy tubular motor is integrated into the cylinder around which the awning is wound. It is electrically powered. It can be operated from a wall-mounted control unit, a remote control or via automation (wind and/or sun sensor).

FOR EVEN GREATER COMFORT...

... you can also **motorise the valance.** The motorised valance is integrated inside the awning load bar and is lowered to protect you from glare when the sun is low on the horizon.

Somfy recommends

Choose a **cassette awning motorised by a tubular motor** to enjoy all the benefits of improved security and extend the lifespan of your awning and your investment. Ask your installer to advise you!

Exclusive Somfy functions which prolong the lifespan of your awning.

- Perfect closing**
The guarantee that the cassette closes perfectly every time. The awning and mechanism are fully protected.
- Soft close function**
Once the cassette closed, the awning stops immediately to protect the mechanism and limit stress on the arms.
- Back release function**
After closing the cassette, the motor can release its grip to relax the fabric. This extends the lifespan of your awning. Function activated by remote control.
- Back impulse function**
Each time you open your awning, the "back impulse" function reverses the motor temporarily to ensure that the fabric remains perfectly taut and avoid an unsightly pocket effect.
- Awning protection**
An electronic detection device stops the motor instantly if a blockage occurs during closing.

For greater comfort and protection, choose automation.

Using radio technology, the wind and/or sun sensors raise or lower your awnings automatically, depending on the weather conditions.

Wind sensor
> for greater protection.

Sun sensor
> for greater comfort and energy saving.

Enjoy all the benefits of radio-controlled, motorised patio awnings!

Enjoy the simplicity of remote control to operate your patio awning without moving from your deckchair. Benefit from reliable, discreet automated systems, that improve your comfort and protect your awning against unexpected events and the weather.

To make your daily life easier

Raise or lower your awning as you wish, with no need to move.

AWNING REMOTE CONTROL

- Available in 4 finishes.

REMOTE CONTROLS THAT ARE AS GOOD TO LOOK AT AS TO USE

Pure Silver Lounge Patio

For perfect harmonisation with your internal and external décor, the majority are available in several finishes: Somfy recommends the Patio finish. This remote control is designed for outdoor use and is water and shock resistant.

EXCLUSIVE TO SOMFY

The "my" function:

To memorize your favorite position (for example awning half-down) and retrieve it immediately by pressing this key. Simple to program and to modify.

Renovation special

Upgrade your existing installation!

With the universal RTS receiver you can upgrade your installation to Radio Technology Somfy®. This gives you all the advantages of remote control and automated wind / sunlight functions.

To protect your patio and the inside of your house from sunlight

Sunny conditions? The sun sensor automatically lowers the awning to shade your patio and protect the inside of your house from heat, maintaining a pleasant temperature. Furniture and plants are also protected from direct sunlight.

WIRELESS SUN SENSOR SUNIS WIREFREE™ RTS

Sunis WireFree™ RTS

100% self-contained.

- Wireless and no batteries (powered by photovoltaic cells).
- Can be fitted anywhere on the façade.
- Sensitivity can be adjusted according to the season.
- Only works with a Telis Soliris RTS remote control unit.

AWNING REMOTE CONTROL

Telis Soliris RTS or Telis 4 Soliris RTS

Operate an awning or group of awnings and manage the associated Sunis WireFree™ RTS sunlight function.

To protect your awning against the wind

Windy conditions? The wind sensor automatically raises the awning to protect the canvas and the mechanism, even in your absence. Essential for protecting your investment.

WIRELESS WIND SENSOR

Eolis 3D WireFree™ RTS

Fits onto the awning load bar and controls a single awning.

- Wireless (battery-operated).
- Long battery life and no maintenance.
- Works with all RTS awning motors.
- Available in 3 finishes: white, black and beige.

or

WIND SENSOR

Eolis RTS

Fitted onto the façade and controls more than one awning.

- Wind sensor (mains-powered).
- Works with all RTS awning motors.

SOMFY ADVICE

For greater protection comfort and protection, Somfy recommends to combine sun sensor and wind sensor.

WIRELESS SUN SENSOR
Sunis WireFree™ RTS

WIRELESS WIND SENSOR
Eolis 3D WireFree™ RTS

Add an extra room to your house!

Enjoy a drink or a meal
with family or friends
outside on your attractive
and comfort patio.
Night time ? Light up your patio.
